

Telos Introduces Assistant Producer v3.5

Advanced Multi-line Talkshow Screening Software Gets New Look, Added Power

5 April 2003, Las Vegas, Nevada

Telos Systems debuts Version 3.5 of Assistant Producer, the popular talkshow call-screening program, at the NAB Convention in Las Vegas this week.

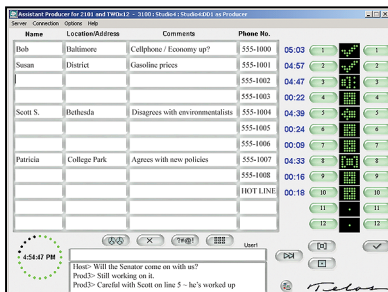

Assistant Producer 3.5 works with both Telos Series 2101 and TWOx12 Talkshow Systems. Using Assistant Producer, talk show hosts can command up to 24 callers at a time with Series 2101, and up to 12 callers when using TWOx12. Assistant Producer integrates many conveniences that help make communication between the producer and talent seamless, such as Caller ID support, a caller database to assist in analyzing caller profiles, Instant Chat windows and on-screen dialing for outgoing calls.

Assistant Producer 3.5 further smoothes talkshow production with exclusive Telos Status Symbols – a unique icon-based visual call management system that informs users of line and caller status with just a glance. Flawless talk shows can easily be produced while out of the studio, thanks to Assistant Producer's ability to remotely produce programs using an Ethernet LAN or WAN connection.

Enhancements to Assistant Producer 3.5 include:

- Works with both TWOx12 and Series 2101 Talkshow Systems.
- User-selectable Spanish, German, French and English language support.
- A customizable interface that allows users to custom-tailor display fonts and window backgrounds.
- An enhanced Caller Data Log with expanded information capture ability.
- Support for multiple "show" configurations with Series 2101 and new TWOx12 Dual Studio Mode.

Assistant Producer 3.5 runs on any standard PC with Windows 98 or higher, Windows NT or Windows 2000. To see a demonstration of Assistant Producer, visit Telos Systems / Omnia in Booth N2618 at the NAB Convention in Las Vegas, April 5 - 10, and browse www.telos-systems.com for more information.
